

SAHIL HAMID SHAIKH

Engineer | Maharashtra, India

Mail: ssahil9635@gmail.com | Phone: +91 9146749096 | LinkedIn: <https://www.linkedin.com/in/sahil-h-shaikh/>

GitHub: <https://github.com/Sahilhamids> | LeetCode: <https://leetcode.com/u/sahilhamid/>

PROFESSIONAL SUMMARY

Electronics and Telecommunication Engineering graduate with knowledge of programming, networking fundamentals, embedded systems, and problem-solving. Skilled in Python, C, data structures & algorithms, and IoT-based projects, with hands-on experience as a Graduate Engineer Trainee at Adani Group. Quick learner with strong analytical and troubleshooting abilities, seeking opportunities in software, networking, telecom, and technology-driven roles

TECHNICAL SKILLS

Programming: Python (DSA & Problem Solving), C (Embedded Systems), C++ (Basic)

Python Libraries: collections, math (Basic)

Data Structures & Algorithms: Arrays, Strings, Linked Lists, Stacks, Queues, Hashing, Recursion, Searching, Sorting, Trees, Heap, Graphs, Dynamic Programming

Core Computer Science: Object-Oriented Programming Fundamentals

Networking Fundamentals: Basic knowledge of TCP/IP, Routing, Switching, OSI Model, IP Addressing, and Network Troubleshooting.

Software Development: Debugging, Time & Space Complexity Analysis

Tools: Git (Basic), GitHub, VS Code, Linux

PROFESSIONAL EXPERIENCE

Ambuja Cements Ltd. (Adani Group)

Assistant Manager – Electrical & Instrumentation

(April 2026 – May 2026)

- Led 16-spout packer HMI upgrade, converting distributed architecture into centralized control system
- Achieved ~30% reduction in machine downtime through system restructuring and validation

Graduate Engineer Trainee – E&I

(July 2025 – March 2026)

- Assisted troubleshooting of motors, sensors, and field instrumentation systems
- Supported calibration and verification of industrial signals
- Participated in shutdown maintenance and system diagnostics

PROJECTS

Smart Automated Fertigation System | C, ESP32, Sensors, Wi-Fi

(July 2024 – April 2025)

- Developed firmware in C/C++ on ESP32 for an automated fertilizer control system
- Implemented rule-based logic using sensor inputs for nutrient dosing and automation
- Integrated IoT-based remote monitoring features for system observation and control
- Helped reduce manual effort and improve fertilizer utilization efficiency
- Led the team during system development, integration, and testing

GSM-Based Home Automation System | C, Arduino, GSM

(Jan 2023 – May 2023)

- Built GSM-based remote appliance control system
- Implemented command-based switching logic
- Designed firmware for reliable communication handling and executed actions based on received commands

EDUCATION

Bachelor of Engineering (BE) – Electronics & Telecommunication Engineering
Government College of Engineering, Chandrapur

(Dec 2021 - Jun 2025)

CERTIFICATIONS

Python (Basic) - HackerRank, Embedded Systems - Internshala, Industrial Automation - Udemy

ACHIEVEMENTS

- Solved 120+ pattern based Data Structures and Algorithms problems solved on LeetCode
- Secured the highest score in final-year engineering project evaluation

STRENGTHS

- Quick learner with strong problem-solving, troubleshooting, teamwork, adaptability, and communication skills.
